Practical 2 : Basic Operations on NumPy Array

• Perform arithmetic operations (addition, subtraction, multiplication, division) on a single array.

```
import numpy as np
# Create a NumPy array
arr = np.array([10, 20, 30, 40, 50])
print("Original Array:", arr)
# Arithmetic operations
print("Addition (+10):", arr + 10)
print("Subtraction (-5):", arr - 5)
print("Multiplication (*2):", arr * 2)
print("Division (/2):", arr / 2)
```

• Demonstrate element-wise operations.

```
import numpy as np

# Create two NumPy arrays
arr1 = np.array([10, 20, 30, 40, 50])
arr2 = np.array([1, 2, 3, 4, 5])
print("Array 1:", arr1)
print("Array 2:", arr2)
# Element-wise operations
print("Element-wise Addition:", arr1 + arr2)
print("Element-wise Subtraction:", arr1 - arr2)
print("Element-wise Multiplication:", arr1 * arr2)
print("Element-wise Division:", arr1 / arr2)
```
